

Understanding the paperreader/

Text is still just words. This stage turns the paper into facts a program can look things up in — what it claims, what it built, and what it never bothered to say.

WHAT GOES IN, WHAT COMES OUT

INPUT The paper as text from stage 1	WHAT HAPPENS Five separate readings plus a checker that re-reads them	OUTPUT One structured file facts a program can look up
--	---	--

THE KEY POINTS

- It asks five separate questions, not one big one. What problem does this paper solve? What model does it build? What results does it claim? What settings did it train with? How was the data prepared?
- Every single fact comes with a receipt. Each extracted value records where it came from — “Table 1, page 5” — so any number can be traced back and checked.
- It writes down what the paper does *not* say. Genuinely the most important part, and the reason is on the right.
- A checker re-reads everything and flags problems. Whatever it flags gets re-done, with the complaint included so the second attempt addresses it specifically. Up to three rounds.
- Numbers are stored as text. Sounds odd, but a setting like “0.1, dropped by 0.2 at epochs 60, 120, 160” is not one number — and “not stated” has to stay sayable.

WHY POINT THREE MATTERS MOST

ONE OF 12 GAPS RECORDED FOR NETWORK IN NETWORK

"Exact number of feature maps per layer: the paper says only 'the same number as in the corresponding maxout network', deferring the actual numbers elsewhere."

The next stage has to write real code, and code needs a real number here. If this gap were quietly filled with a plausible guess, the result would train perfectly and report a confident number *for the wrong model*. Recording the gap keeps that decision visible instead of silent.

ACROSS THE FOUR PAPERS READ

PAPER	CLAIMS	SETTINGS	GAPS
Network In Network	12	17	12
All Convolutional Net	17	13	11
Deep Residual Learning	66	28	7
Wide Residual Networks	61	20	11

Known rough edge. The checker never fully runs out of things to say — every paper still has a few open flags after three rounds. Looking at them, most are it raising a worry and then talking itself out of it in the same sentence. Not wrong, but it costs a re-run each time.
